

Preetish H. Shantharaja

Professional Experience

Remote Frontend/Vue.js Consultant

JUN-2018 – Present

- Worked as remote Vue.js Developer for [TheCodingMachine](#)
- Worked as Frontend Consultant for [PavelT Solutions](#)
- Worked with small startups to mentor their employees with web development
- Made good SEO for websites such as pre-rendering, SSR, Vue-meta, Google page speed optimizations, content optimization etc.
- Made various performance optimizations for mission critical applications such as lazy loading, code splitting, minification, code reuse, CDN integration etc.
- Improved website security by preventing Injection attacks and XSS attacks by implementing various security measures.
- Made the application stable and bug free with Unit testing using Jest, Vue-test-utils and vue-testing-library.
- Made feature enhancements and UI bug fixes for existing applications

Languages/Tools: HTML, CSS, JavaScript, Vue, Vuex, vue-test-utils, Jest, Element UI etc.

Full Stack Developer at [Mitel Networks](#)

SEP-2015 – JUN-2018

- Developed rich UI and features for Mitel Connect desktop application that supports all core functionalities of communication such as calls, conferences, workgroups, events, etc.
- Worked on Micro services using Node JS and container management system in Cloud Platform using Docker.
- Implemented Multi Party Video feature for ShoreTel Connect which increased the sales by 30%. This was crucial to compete with known brands like Cisco
- Fixed several existing defects hence increasing the stability of the application

Languages/Tools: HTML, CSS, JavaScript, Vue, canJS, Node, Express, Docker, AWS

Key Projects

Crowdfunding Application like Kickstarter

Developed a crowdfunding application for a French Fintech company **Incit'financement**, where startups can showcase their products/ideas and investors can show interest, invest, access documents etc.

Web Application for Perks/Coupon management like Groupon

Developed a web application for **École Polytechnique** to showcase various perks in different categories. Users who sign up as company can create perks with details such as features, coupon code, benefits etc.

Web Application for Construction Company

Developed a web application for **Save Up**, to manage their employees such as assigning workers to worksites, assigning managers, manage work sites, attendance etc. Workers had separate login with meals plans, salary and other details.
